

## AMERLUX LIGHTING SOLUTIONS

### **A Complete Range Of High-Performance, Task-Specific Lighting.**

Uncompromising engineering. Unrivaled performance. Unsurpassed energy efficiency. These are just some of the characteristics common to all fixtures in the Amerlux family.

Our line stretches across seven broad categories of lighting: track, recessed downlighting, recessed multiples, pendants, linear systems, power systems, and specialty products. And woven throughout is a commitment to sustainable design, peak optical performance and architectural styling—a philosophical approach that we call EcoTectural.

Our commitment to energy efficiency is also reflected in our exclusive Power Of One program. By allowing the use of a single energy-efficient lamp type in a diverse line of complementary fixtures, the program makes it easy to create complete, dramatic, efficient lighting schemes to meet today's stringent energy codes with the added benefits of simple maintenance and reduced operating costs.

Flexibility. Reliability. Sustainability. They're all elements of design at Amerlux. And they're the reason our fixtures are ideal solutions for virtually any application in the retail, supermarket, commercial, hospitality and automotive environments.

# FLEX. ABILITY.

AN OVERVIEW OF THE PRODUCTS WE OFFER.

## ECOTECTORAL

With EcoTectural, Amerlux offers architects and lighting designers a selection of specification-grade fixtures that deliver the best quality and quantity of light while getting the most out of every watt of energy. A commitment that can be found within every category of our product line, EcoTectural makes it easy to create spaces that are not only functional, inspirational, and adaptable, but also sustainable.

## TRACK LIGHTING

Ideal for accent and display lighting, Amerlux track fixtures offer the widest range of energy-efficient lamping options and are aesthetically designed to fit any interior design. Our track heads are available with multiple beam spreads for added flexibility and functionality.

## RECESSED DOWNLIGHTING

The foundation of many lighting schemes, recessed fixtures can perform a variety of tasks from warming a space with general ambient light to highlighting a particular area of interest. Functional and dramatic yet energy-efficient and inconspicuous, Amerlux recessed downlighting offers a broad range of capabilities in a vast array of aperture sizes.

## RECESSED MULTIPLES

An excellent solution for retail and commercial accent and display lighting, Amerlux recessed multiples feature clusters of accent and wall wash optics that can be individually aimed to suit a particular display or application. This flexibility provides not only a cleaner look at the ceiling line but also lower installation costs than traditional recessed fixtures.

## PENDANTS

Beautifully styled Amerlux pendants can enhance the visual aesthetic of a space while providing effective, energy-efficient display or ambient lighting. Our pendants come in a variety of styles with a range of lamping and optics options making them ideal for all ceiling heights in applications from retail stores to large-scale circulation spaces.

## LINEAR SYSTEMS

Capable of providing direct or indirect lighting and configurable in straight runs or patterns, Amerlux linear systems offer a palette of elegant solutions for ambient, task or accent lighting, particularly in commercial and supermarket applications.

## POWER SYSTEMS

Amerlux power systems come in three varieties—track, busway and quick grid. Each offers a simple, flexible solution for supplying power to a comprehensive lighting scheme and busway offers the flexibility of powering other electrical equipment. All can be configured to suit virtually any application and mounting condition.
